7	Where to Get VenueLock	19

1 Introduction

VenueLock caps event attendance at an exact seat count. An organizer creates a venue with a fixed seat map, attendees book a specific seat with a short join code, and every booking produces a QR entry pass that is scanned at the door.

- **No overbooking** — seat capacity is enforced on the server, so two people can never hold the same seat.
- **No paper tickets** — the QR entry pass lives on the attendee's phone and survives a restart.
- **No bottleneck at the gate** — several approved volunteers can scan in parallel, each with their own access.
- **No spreadsheets** — seat and check-in status update live on every device at the venue.

1.1 The three roles

One app serves three kinds of user, chosen from the first screen:

- **Admin** — creates and configures venues, reserves seats for guests, reviews volunteer applications, and scans at the door.
- **Audience** — joins a venue with its code, books a seat, and carries the entry pass.
- **Volunteer** — applies to one venue with its access code and, once approved, scans entry passes at the gate.

Figure 1: Choose your role when the app opens

2 Your Profile

The person icon in the top-right corner of the role screen opens **My Profile**. The name, email, and roll number saved here are used to prefill booking and volunteer forms on this device, so attendees do not have to retype them for every event. The same screen lists shortcuts to the Admin Console, your Entry Passes, and your Volunteering activity.

Figure 2: My Profile — personal details and role shortcuts

3 For Admins

3.1 The Admin Dashboard

Choosing **Admin** opens your dashboard. The three tiles at the top summarise every venue you own: how many venues you run, how many seats are booked in total, and how many people have been checked in. Below them is one card per venue, each showing its date, its sections, its booking progress bar, and whether it is still **OPEN**.

Figure 3: Admin dashboard with venue cards and live totals

3.2 Creating a Venue

Tap **+ New Venue**. Creation is a three-step wizard, tracked by the dots at the top of the screen.

Step 1 — Venue details. Give the venue a name and pick the event date.

The screenshot shows a mobile app interface for creating a venue. At the top, the status bar displays the time 7:59:38, signal strength, and 89% battery. The app header is 'Create Venue' with a back arrow and a progress indicator (one blue dot, two grey dots). Below this is the 'Venue Details' section with the prompt 'What is this venue for?'. There is a text input field for 'Venue Name' with a location pin icon. Below that is an 'Event Date' field showing 'Jul 28, 2026' with a calendar icon. A large blue 'Next' button is at the bottom of the form. The bottom of the screen shows the Android navigation bar.

Figure 4: Step 1 — name and event date

Step 2 — Seat layout. A venue is made of one or more **sections**. Each section has a name and a grid of rows and columns; the running total at the top of the screen tells you exactly how many seats the venue will hold. Use + **Add Section** for venues split into blocks (for example *male*, *female*, and a guest block), each with its own size.

The screenshot shows a mobile app interface for creating a venue. At the top, the status bar displays the time 8:00:42, signal strength, and 89% battery. The app title is 'Create Venue' with a back arrow. Below the title is a progress indicator with two dots, the second of which is filled. A summary bar shows '100 total seats across 1 section'. The main section is titled 'Section Name' and 'General'. It features two sliders: 'Rows: 10' and 'Columns: 10'. A calculation at the bottom right of the sliders shows '10 x 10 = 100 seats'. At the bottom, there are three buttons: '+ Add Section', 'Back', and 'Review'.

Figure 5: Step 2 — sections, rows, and columns

Step 3 — Review and publish. Check the summary and tap **Publish Venue**. The seat map is created on the server at this point, and the venue's capacity is fixed.

Figure 6: Step 3 — review and publish

3.3 The Venue Screen and Access Code

Publishing takes you straight to the venue screen. This is the control centre for one event: live booked and checked-in counts, the section list, the attendee list, and — most importantly — the six-character **access code**.

Share that code with attendees so they can book a seat, and with volunteers so they can apply to scan at this venue. The copy icon beside it puts the code on the clipboard.

Figure 7: A freshly published venue and its access code

As bookings arrive, the same screen fills in: sections, attendee names with their seat numbers, and a **Checked In** badge for everyone already through the door.

Figure 8: A live venue with sections, bookings, and check-in status

3.4 Reserving Seats for Guests

Reserve Seats for Guests opens the admin seat map. Blue seats are available, grey ones are already booked by attendees, and amber ones are reserved by you. Tap an available seat, note who it is for, and confirm — that seat is then held back and cannot be booked by the public. Tapping a reserved seat again releases it.

Figure 9: Left: the reservation seat map. Right: naming the guest.

3.5 Approving Volunteers

Volunteer Applications lists everyone who has applied to help at this venue using its access code. Approving an applicant gives their device — and only their device — permission to scan entry passes for this venue; rejecting or revoking removes it again. Until an application is approved, the volunteer cannot check anyone in.

3.6 Checking People In

Open Scanner turns the phone into a check-in station. The banner at the top shows live progress (for example *1 / 3 checked in*), the camera window reads entry-pass QR codes, and the list underneath holds every booked attendee. Point the camera at an attendee's pass to check them in instantly, or use the **Check In** button beside a name to admit someone manually if their screen is broken or their battery is dead.

Figure 10: The scanner: live progress, camera, and manual check-in

4 For Attendees

4.1 Joining a Venue

Choose **Audience** and enter the six-character code the organizer gave you, then tap **Join Venue**. Passes you already hold are listed below under **My Entry Passes**, so you can reopen them at any time — even without a network connection.

Figure 11: Join a venue with its access code

4.2 Picking a Seat

The venue's live seat map opens. Blue seats are free, grey seats are taken. If the venue has several sections, use the chips above the grid to switch between them.

Figure 12: Left: the live seat map. Right: a selected seat, ready to confirm.

Tap a free seat — it turns dark blue and the bar at the bottom names it (for example *General · Row 3, Col 5*). Tap **Confirm Seat** to continue.

4.3 Booking Your Seat

Fill in your name, email, and roll number, then tap **Book My Seat**. If you have saved a profile, these fields are already filled in for you. The seat is claimed on the server at this moment; if someone else took it in the meantime, you will be asked to pick another.

Book My Seat

Figure 13: Confirm your details and book

4.4 Your Entry Pass

The booking produces your **entry pass**: a QR code with the venue name, date, seat, section, and your details, marked **Valid Entry Pass**. Show this at the door to be scanned in.

The pass is stored on your phone, so it opens again from **My Entry Passes** even after the app is closed. Use **Save** to keep a copy in your gallery, or **Share** to send it to yourself as a backup.

Figure 14: A QR entry pass

5 For Volunteers

Choose **Volunteer**, enter the venue's access code and your name (a phone number is optional), and tap **Apply**. The organizer sees your application on their Volunteer Applications screen.

Figure 15: Applying to volunteer at a venue

Once the organizer approves you, the scanner unlocks on your device and you can check attendees in exactly as described in *Checking People In*. Your access is scoped to that one venue and to the device you applied from — there is no shared admin login to pass around at the gate.

6 Tips and Troubleshooting

- **The code is not working.** Access codes are six characters and are not case-sensitive; check for a confused 0 and O. Make sure the organizer has published the venue.
- **My seat was taken while I was booking.** Seat ownership is decided by the server at the moment you tap **Book My Seat**, so a busy venue can lose you a seat between selecting and confirming. Pick another free seat and try again.
- **The scanner shows a black window.** VenueLock needs camera permission. Grant it in Android *Settings* → *Apps* → *VenueLock* → *Permissions*, then reopen the scanner.

- **An attendee's phone is dead.** Find their name in the scanner's attendee list and use the **Check In** button to admit them manually.
- **Counts look out of date.** The venue screen refreshes on a timer; the refresh icon in the top-right corner forces an immediate update.
- **Keep guest seats out of the public pool.** Reserve them from the admin seat map *before* you share the access code.

7 Where to Get VenueLock

- Web app and landing page: <https://theobsidianeye-arif-foysal.github.io/Venue-Lock-v1/>
- Android APK: <https://github.com/TheObsidianEye-ARIF-FOYSAL/Venue-Lock-v1/releases/latest/download/VenueLock.apk>
- Source code: <https://github.com/TheObsidianEye-ARIF-FOYSAL/Venue-Lock-v1>
